

# FLEX FOOTING

## Equestrian and playground surfaces are safer with rubber.

- Adds spring or “cush” to footing
- Prolongs life of the sand
- Does not rot
- Enhance the training of your horse
- State of California MSDS report: “Tire rubber is not a carcinogen” & “non- hazardous waste”
- Have a more horse friendly surface
- Provides a safer surface, less slippage
- Saves your horse’s legs
- Builds your horse’s confidence
- Long-term stability - Low annualized investment

“I had heard of crumb rubber for riding arenas but I had no idea how well the product worked until I saw my own horse compete on Sharpton Stables dressage arena for the fall horse trials”.. Ridden by Jim Graham, in the warm up “Rukky” looked normal, but when he entered the arena I was amazed - his trot was bigger, his canter loftier, and his walk more free.

Since that experience I have installed crumb rubber in my own arena. My clients with their thoroughbreds and warmbloods were ecstatic, my school horses showed a noticeable difference. “It is an absolute joy of having a predictable footing that is neither too deep nor too hard”. Anne Aspoas, owner and instructor of Aspen Ridge Stable, Duluth, MN. Anne’s students compete across the US and Europe.

“I believe in what is best for the horse. The rubber arena material does just that, it provides a footing that will help the horse in competition, and prolong it’s ability to compete.”

Jim Graham is known for his competing with the US Equestrian Team and the clinics he conducts throughout the USA.

---

Dr. Dana Humphries, Professor at the University of Maine, is the foremost expert on tire rubber effect on the environment. He has determined, through research, that there is no residual effect ( benign ) on the environment. Rubber is used in wetlands where the rubber is submerged in water ( as a base ) for 24/7, 365 days a year with NO RESIDUAL EFFECT. ( Flex Footing MSDS is available upon request )
